## **ALLIANCE STARTERS**

### **General Product Information**

- Alliance starters are designed for customers who demand reliability and performance. Alliance premium re-manufactured starter installs quickly and easily, and provides cranking performance you can count on.
- Alliance re-manufactured starters meet or exceed OE standards because they're re-manufactured using processes similar to the way new starters are made. Components are gauged, sorted, tested and renewed to OE-quality specifications, and vital parts are replaced with new ones where needed. Every component and part must meet strict Alliance standards.
- Scheduled laboratory testing of starters from the assembly line includes loading the starter to an OE-quality specification. Instead of a "one-size-fits-all" approach, our test engineers make certain that each starter model is tested with the load specification for its particular applications.

## Product Highlights

- Alliance remanufactured starters meet or exceed OE Standards - these are remanufactured with in-process inspections/tests throughout the production process
- Component parts are gauged, sorted, tested while vital parts are replaced 100% NEW

- Starter bushings, brushes and brush springs are replaced with New
- Field coils are inspected and tested for insulation weakness/leakage and wrapped for solid insulation
- Solenoids are electronically tested for amperage for Hold-in and Pull-in current to meet or exceed OE specifications or replaced with new
- Armatures are cleaned, inspected, tested for insulation leakage, commutators machined/polished and checked for run-out
- All starter units are tested to measure torque, power, speed and voltage, with reports enclosed with the product.
